How to read this script:

ON SCREEN what to show while you speak

Normal text is what you say. Speak slowly, smile, and pause briefly between scenes.

0:00 - 0:30 1 · Opening

Landing page

ON SCREEN Home page of the live link. Let the satellite background change once.

Namaste. We are team **Kabhi Code Kabhi Bug**, and this is **BhoomiSetu**, our prototype for Smart India Hackathon problem statement 26016, from the Ministry of Rural Development.

Land acquisition in India follows the RFCTLARR Act of 2013. The law sets clear deadlines and protects families who give up their land. But in practice, it is hard to see where a case is stuck, which deadline is about to lapse, and whether money paid by the office actually reached the family. BhoomiSetu tracks every land parcel, from proposal to possession, on a map and against the law's own deadlines.

0:30 - 1:10 2 · National dashboard

Login: National dashboard

ON SCREEN Scroll to “Evaluator logins” → National dashboard → Sign in. Point at the KPI tiles.

This is the national dashboard. It shows what the problem statement asks for: area notified and acquired, compensation assessed and paid, affected and displaced families, R&R progress and possession.

ON SCREEN Point at the red alerts.

These are live deadline alerts. They are not ordinary reminders. Each one names the section of the Act and what happens legally if the deadline is missed.

ON SCREEN Point at the disbursed vs acknowledged figures.

And this is the number we care about most. The office has disbursed about seven hundred and thirty-nine crore rupees, but families have confirmed receiving about five hundred and sixty-five crore. That leaves about one hundred and seventy-four crore unconfirmed. Disbursed is what the office says. Acknowledged is what the family says.

Figures are from the synthetic demo data (₹739.03 Cr disbursed · ₹564.56 Cr acknowledged · ₹174.47 Cr unconfirmed). Confirm them on screen before recording.

ON SCREEN Sidebar → Project workspace (opens the Pune-Satara Expressway project). Point at the “34 days” countdown.

Here is our demo project, the Pune-Satara Expressway expansion. It is at the final declaration stage. The system shows that the declaration must be published within thirty-four days. If it is not, then under section 19 the earlier notification is treated as cancelled, and the process has to start again.

Every stage has a clear owner. The officer who prepares a file cannot also approve it, and every document is attested by a named officer before it counts.

ON SCREEN Sidebar → GIS map. Switch “Colour by” between stage, payment and risk.

Every parcel is on the map. It can be coloured by stage, by payment, or by deadline risk. The system also checks the map against the law. It flags irrigated multi-crop land under section 10, and land in a Scheduled Area under section 41.

ON SCREEN On a phone: open the live link + /field. Show the sign-in, then the parcel list.

For field staff, there is a mobile app that works without internet. The officer walks the boundary and records a GPS point and a photo at every corner. Everything is synced when the network returns.

ON SCREEN Sidebar → Families & money → open a family. Show disbursed and acknowledged rows.

When compensation is paid, the family confirms it on their own phone, using the phone's fingerprint or face lock. We never store anyone's fingerprint. We only keep a secure key from their phone.

ON SCREEN Sidebar → Trust center → click “Check” on any row → ✓ Verified.

Every approved record is fingerprinted and anchored on a blockchain. If someone quietly changes a record in the database later, this check shows a mismatch. Anyone can verify a record through a public link, without logging in.

ON SCREEN Open /portal → search “Khed Shivapur” → show the parcel results.

Citizens use the public portal without logging in. They can search their village and survey number, read published notices, and file a grievance. Sensitive details, such as why a payment is on hold, are visible only to the officers who need them. This is enforced in the database itself, not just hidden on the screen.

ON SCREEN Officer view → Rule packs → switch between the Maharashtra pack and the National Highways pack.

The law itself is stored as versioned rule packs. The same engine runs the 2013 Act and a sample National Highways Act pack. When the law changes, we update the rules, not the software.

ON SCREEN Point at a “MOCK” badge and the “DEMO DATA” badge.

To be clear about this prototype: all data is synthetic, and no real citizen's information is used. Payments, identity checks and SMS go through test connectors, and they are labelled MOCK on screen. The AI assistant runs in demo mode, and it only gives advice. It never changes a record. The blockchain is a local test network. Each of these connectors can later be pointed at the state's real systems, without changing the rest of the application.

ON SCREEN Return to the home page. Hold on the title for two seconds.

BhoomiSetu makes every deadline visible, every approval provable, and every payment confirmed by the family. The prototype is live at the link in the description, with ready demo logins on the home page.

Thank you for watching.

Before you record

Preparation checklist

- ☐ Open the live link **5 minutes early** so the server is awake.
- ☐ Wait until the home page shows **1,267 records anchored**.
- ☐ Check the national gap figures and the “34 days” countdown on screen.
- ☐ Use a clean browser window at 100% zoom; close other tabs.
- ☐ Keep a phone ready with the live link + `/field` open.
- ☐ Record the screen at 1080p; use a quiet room and a headset mic.
- ☐ Do one practice run with a timer; aim for 4:30–4:45.

Demo logins (password `bhoomisetu-demo`)

ACCOUNT	OPENS
<code>oversight</code>	National dashboard
<code>collector.pune</code>	Collector desk
<code>lao.satara</code>	District dashboard
<code>talathi.khedshivapur</code>	Field app (<code>/field</code>)

Every account ends with `@bhoomisetu.local`. The home page cards fill these in for you.

Speaking tips

Keep it human

- ☐ Talk to one person, not to an audience.
- ☐ Say large numbers in words (“about seven hundred and thirty-nine crore”).
- ☐ Pause for one breath after each scene.
- ☐ If you stumble, pause and repeat the sentence; cut it later.

If you are short on time, cut in this order

- ☐ Scene 6, the citizen portal sentence (≈ 15 s)
- ☐ Scene 3, the “every stage has a clear owner” lines (≈ 10 s)
- ☐ Scene 4, the colour-by sentence (≈ 8 s)

Facts used in this script

CLAIM	SOURCE IN THE PROTOTYPE
Declaration due in 34 days; s.19 “deemed rescinded” if missed	Project MH-PSX-2026-001, statutory clock <code>DECLARATION</code> (rule pack <code>larr-2013-maharashtra@1.0.0</code>)
₹739.03 Cr disbursed · ₹564.56 Cr acknowledged · ₹174.47 Cr unconfirmed	National dashboard KPIs, synthetic demo data (11 projects, 5 states)
Section 10 and section 41 map flags	Constraint flags on the demo corridor: irrigated multi-crop and Scheduled Area parcels
Fingerprint never stored	WebAuthn on the family's own phone; only a credential ID and public key are kept

Blockchain records and tamper check	Trust center “Check”; local Hardhat test chain ($\approx$ 1,267 records anchored)
Mocks: payments, identity, SMS, AI answers	Shown with MOCK badges; all personal data is synthetic
National Highways pack is a sample	nh-act-1956@1.0.0 is marked illustrative in the pack viewer
