

BhoomiSetu — Prototype Video Script (v3)

One story, in the same order as the law: national view, a proposal, a project, its land, the field, the money, trust, citizens, and an honest close.

LENGTH

≈ 4 min 55 s

SPOKEN WORDS

≈ 696

PACE

≈ 140 words / min

What changed from v2

- Scene 3: the real pre-checks (missing papers, overlaps, protected or irrigated land) instead of “duplicate survey numbers”.
- Scene 5: colour by stage or payment, not risk.
- Scene 7: recorded as **lao.satara** on MH-SIN-2025-004, with a real OCR upload (sample PDF now in the app), a visible solatium check, and a real possession block (survey 141). The s.80-in-rupees line is cut (it is ₹0 in the demo data).
- Scene 8: the language switch is shown on the citizen portal, where it works.
- Scene 9: grievance tracking is named as a MOCK.

How to read this script:

ON SCREEN what to show while you speak

Normal text is what you say. Pause for one breath between scenes.

0:00 - 0:25 1 · Opening

[Home page](#)

ON SCREEN Home page of the live link. Let the satellite background change once.

Namaste. We are team **Kabhi Code Kabhi Bug**, and this is **BhoomiSetu**, our prototype for SIH problem statement 26016, from the Ministry of Rural Development. Land acquisition follows the RFCTLARR Act, 2013. The law has strict deadlines and strong protections for families. But today, nobody can see the whole chain. BhoomiSetu tracks every land parcel, from proposal to possession, on a map, against the law's own deadlines.

ON SCREEN Scroll to “One account per screen” → National dashboard → Sign in. Point at the KPI tiles.

This is the national dashboard. It shows what the problem statement asks for: area notified and acquired, compensation assessed and paid, affected and displaced families, R&R progress, and possession.

ON SCREEN Point at the breach alerts.

These are not simple reminders. Each alert names the section of the Act, and what happens legally if the deadline is missed. An alert goes to the responsible officer first, and moves up to district and state only after a breach.

ON SCREEN Point at “Disbursed vs. acknowledged”.

And this is the number we care about most. The office has disbursed about seven hundred and thirty-nine crore rupees. Families have confirmed about five hundred and sixty-five crore. About one hundred and seventy-four crore is still unconfirmed.

ON SCREEN Open the post menu (top right) to show the role switcher. Then Sidebar → Proposals.

Every role sees only its own work. A project director from NHAI sees only NHAI projects, and this is enforced in the database itself. A new project starts here. The requiring body uploads its route file, and the system checks it: missing fields and papers, overlaps with other projects, and protected or irrigated land. Then it is routed to the right Collector.

ON SCREEN Sidebar → Project workspace (MH-PSX-2026-001). Point at “34 days left”, then at the tag larr-2013-maharashtra@1.0.0. Scroll past the yellow VERIFY box.

This is our demo project, the Pune-Satara Expressway expansion. It is at the declaration stage. Under section 19, the declaration is due in thirty-four days. If it is missed, the earlier notification is cancelled, and the process starts again. This tag shows which version of the law the project runs on. The officer who prepares a file cannot approve it, and every document is signed off by a named officer.

ON SCREEN Parcels tab → Map. Switch “Colour by” between stage and payment. Point at the chainage strip. Open Layers.

Every parcel is on the map, coloured by stage or by payment. This strip shows the whole twenty-six-kilometre corridor at a glance. The map also checks the law: irrigated multi-crop land under section 10, Scheduled Areas under section 41, and forests.

ON SCREEN Click survey 142/2. Point at the area box and the owners list.

Only part of this plot is taken: 2.25 of 7.69 hectares, shown in hectares, acres and guntha. It has three joint owners with their shares, and their ID numbers are masked. The risk score is advisory only.

ON SCREEN Phone, live link + /field → assignment → Continue. Point at the accuracy badge and the Parcel button; press and hold “Mark Point”; then tap the s.12 Notice tab.

In the field, the Talathi uses this mobile app, which works offline. At each corner, they hold for five seconds to steady the GPS, and take a photo. Poor accuracy shows in red. The walked path is saved, and the section 12 notice served to the owner is recorded.

ON SCREEN Laptop, Tehsildar login → Field office.

In the office, the Tehsildar checks the photos and accuracy, then approves. A correction creates a new version. Nothing is silently overwritten.

ON SCREEN Project switcher → MH-SIN-2025-004 → Award → “Upload signed award PDF”. Award number MH-SIN-2025-004/LAND/2 → Choose PDF & attest → sample-award-MH-SIN.pdf → tick → Attest & upload. Wait about 5 seconds.

We do not calculate compensation. That is the Collector's legal job. Here the officer uploads a signed award. OCR reads it and suggests each amount in grey.

ON SCREEN Click Accept on each field, top to bottom. Point at the warning under Ramesh Nikam.

The officer accepts each value; nothing is accepted in bulk. Then the system checks it against the Act. Here it caught a mistake: this family's solatium is not the full hundred percent that section 30 requires.

ON SCREEN Families & money → point at “Disbursed, not acknowledged”. Then Parcels → survey 141 (Pargaon) → Possession.

When money is paid, the family confirms it on their own phone, with fingerprint or face lock. We never store a fingerprint. Until the family confirms, possession stays blocked under section 38, and the screen says why.

ON SCREEN Trust center → “Check” on a row → Verified.

Every approved record is anchored on a blockchain. If someone quietly edits the database, this check shows a mismatch. The chain never slows the app down.

ON SCREEN Open /portal → search “Khed Shivapur”. Then switch the portal's language to हिन्दी and मराठी.

Citizens use this portal without logging in. They can find their parcel, read notices, raise objections and file grievances. The citizen portal works in English, Hindi and Marathi. Why a payment is on hold stays visible only to district officers and above.

ON SCREEN Officer view → Rule packs → switch between Maharashtra and National Highways.

The law is stored as rule packs. When the law changes, we update the rules, not the software.

ON SCREEN Point at a MOCK badge and the DEMO DATA badge. End on the home page; hold the title for two seconds.

All data here is synthetic. Payments, identity checks, SMS and grievance tracking use test connectors marked MOCK. The AI assistant only gives advice; it never changes a record. Each connector can later point to real state systems. BhoomiSetu makes every deadline visible, every approval provable, and every payment confirmed by the family. Thank you.

Fix before recording (checked against the app)

DO THIS	WHY
Scene 7 needs lao.satara, not collector.pune	MH-SIN-2025-004 is in Satara district; the Pune Collector cannot open it. lao.satara can upload awards (only an LAO drafts an award).
Download the sample award first	Award → “Upload signed award PDF” shows a <i>Demo: sample award PDF</i> link (also at <code>/demo/sample-award-MH-SIN.pdf</code>). It holds three families' asset values; Ramesh Nikam's solatium is deliberately short so the check flags it.
One take for the upload, or reset	The upload creates a draft award that stays until the server restarts. For a retake, use award number <code>.../LAND/3</code> , or in Render choose Manual Deploy → Restart service (about 3 minutes; the demo resets).
Possession: survey 141, Pargaon	On MH-SIN, survey 141 is blocked because one family has not acknowledged its land compensation. The gate lists each reason.
Language switch: use the portal's own switcher	Only the citizen portal and the family's acknowledgement and passbook pages are translated. The हिं/मरा buttons in the officer top bar do not change officer screens.
Don't colour by risk	Most parcels score the same, so the map turns one colour. Stage and payment show real differences.
Cut: “s.80 interest in rupees”	In the demo data, possession is only taken on fully paid parcels, so the interest estimate is ₹0. The line was removed.
Field app on the phone, not the laptop	GPS and camera need the phone. Turn on Do Not Disturb. If you are far from Khed Shivapur, the app says how far; press “Parcel” to show the plot. Don't submit the survey on camera.
Scroll past the yellow VERIFY box	Keep it in the app (it is honest), but don't linger on it.

Accounts (password `bhoomisetu-demo`, every account ends with `@bhoomisetu.local`)

SCENE	ACCOUNT	OPENS
2	<code>oversight</code>	National dashboard
3	<code>demo</code> (role switcher), <code>pd.nhai</code>	Role switcher, Proposals
4, 5, 8	<code>collector.pune</code>	Project workspace, map, Trust center, Rule packs
6 (office)	<code>tehsildar.haveli</code>	Field office
6 (phone)	<code>talathi.khedshivapur</code>	Field app (<code>/field</code>)
7	<code>lao.satara</code>	MH-SIN-2025-004: Award, Families & money, Possession

Before you record

- ☐ Open the live link 5 minutes early so the Render server wakes up.
- ☐ Wait until the home page shows about 1,267 records anchored.
- ☐ Check on screen: ₹739 Cr disbursed, ₹564.6 Cr acknowledged, ₹174.5 Cr unconfirmed, and “34 days left”.
- ☐ Clean browser window at 100% zoom, other tabs closed.
- ☐ Phone on Do Not Disturb, live link + `/field` open, location allowed.
- ☐ Record at 1080p, quiet room, headset mic. One timed practice run; aim for 4:45–4:55.

If you run long, cut in this order

- ☐ Scene 5, “and forests” (≈ 2 s)
- ☐ Scene 4, the “prepares a file cannot approve it” sentence (≈ 8 s)
- ☐ Scene 6, the Tehsildar part (≈ 12 s)
- ☐ Scene 3, the routing sentence (≈ 5 s)

Speaking tips: talk to one person, not an audience. Say big numbers in words. If you stumble, pause and repeat the sentence; cut it later.
